# My Toad Book

Name: \_\_\_\_\_

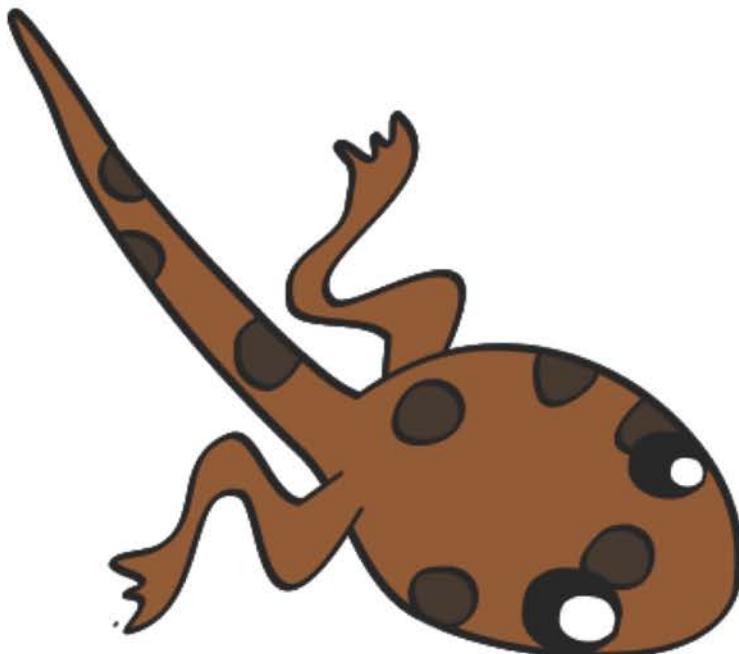

Eggs are laid in long strands of anywhere from 3,000 to 6,000 eggs.

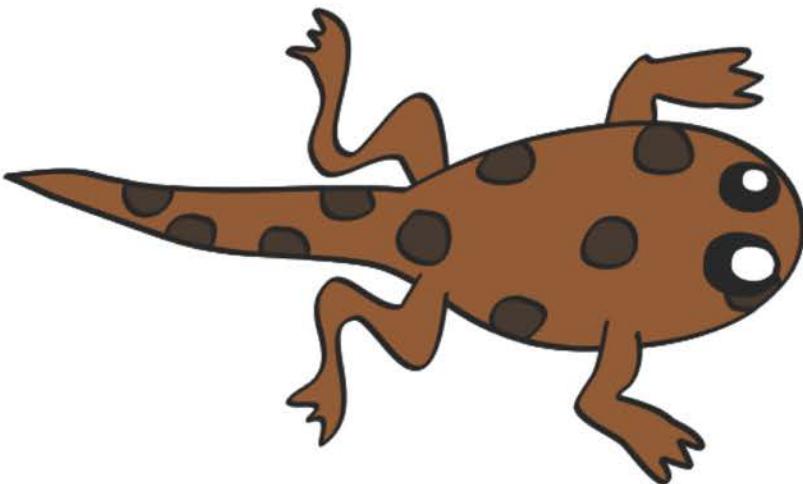

After about 2 – 4 weeks, the eggs hatch and tadpoles emerge.

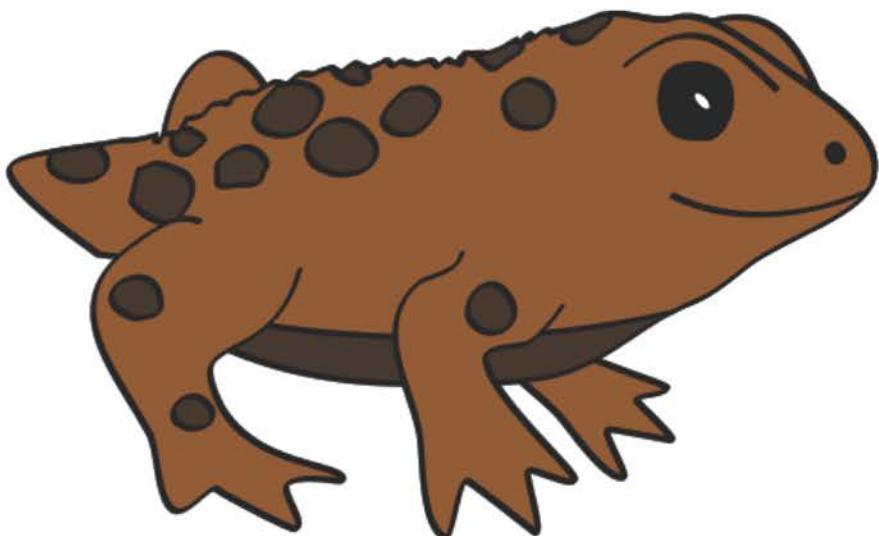

These tadpoles have tails and gills, which means they need to live in water to breathe.

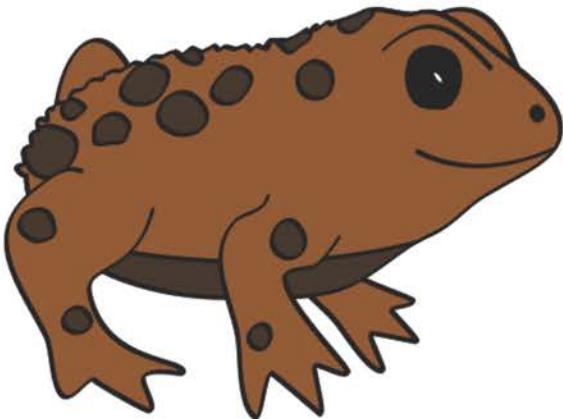

As the tadpole eats and grows, hind legs start to sprout.

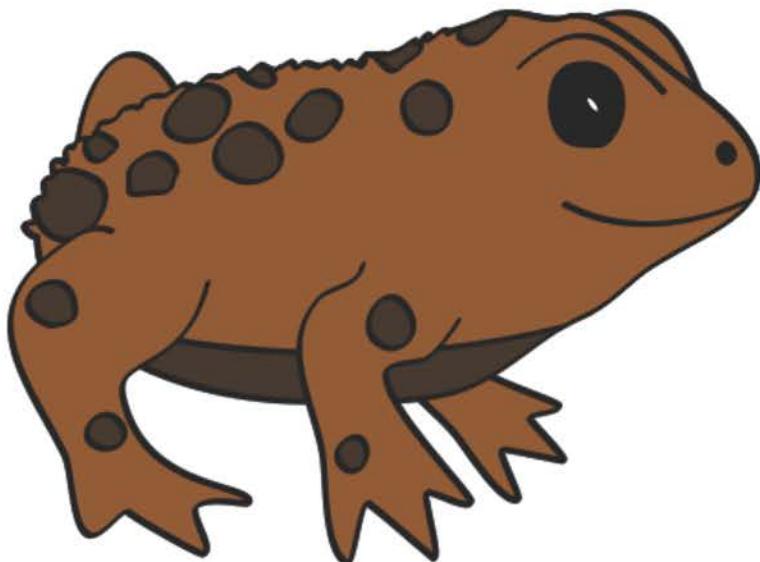

Soon after the hind legs have sprouted, the tadpole will sprout front legs too. As their legs grow, their tail starts to shrink.

They also develop lungs which enable them to breathe on land. When they are ready, the toadlets hop out of the water and onto land to start continue the rest of their life.

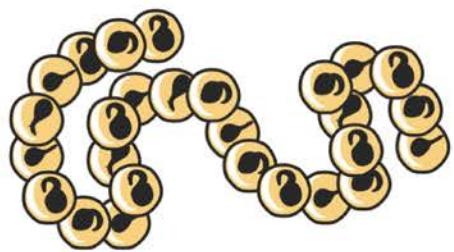

Toads have squat, plump bodies with brownish skin and darker spots. They are active mainly at night, using their long, sticky tongue to catch their prey of insects and worms.

Toads are usually covered with bumps which they release poison from when they feel threatened.

# What I know about Toads

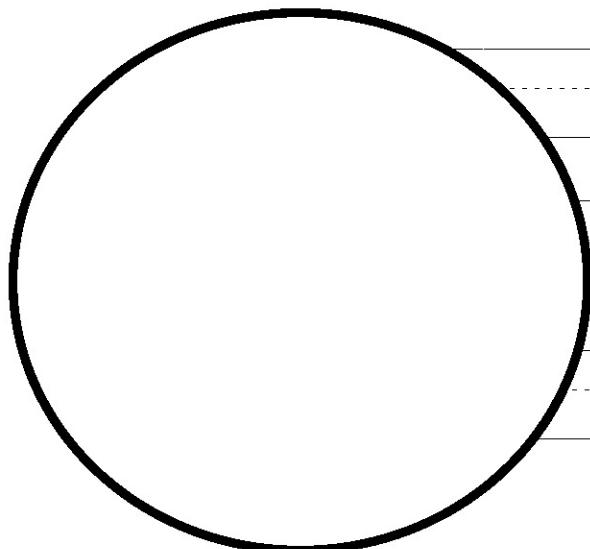

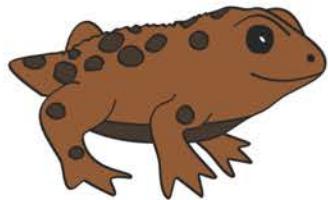

# What I want to Learn about Toads

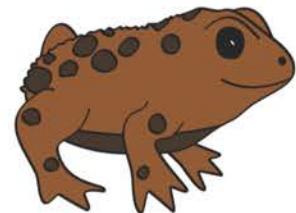

Handwriting practice lines are located on the left side of the page. There are two sets of horizontal lines: the top set consists of a solid top line and a dashed midline, with a solid bottom line below; the bottom set consists of a solid top line and a dashed midline, with a solid bottom line below. These lines provide a guide for letter height and placement.

# Roll and Write

Roll the dice and then write the words.
